Serial Nos 9

Part B for November 1929

SUBJECT

Improvement of water supply to Kolar Town

(113) To the PC Kolar, Chief Engineer & Comptroller
No. 4-122 J-C) 6 XI 29
Sanctions the revised estimate for Rs 81,000/-
for the above

(W)
-20/12/29

Office of t e Dewan of Pudukkottai
Dated 31st March 1928

Herewith copying copy of the Proceedings of the meeting of the Members of the Pudukkottai Municipal Council held this afternoon is forwarded with compliments to the General Secretary, to Government for favour of taking needful further action in respect of the several questions referred to therein

Dewan

(a) 2 The present supply of drinking water is very unsatisfactory The water is very turbid and unfit for consumption Now that electric energy is available it should be possiole to instal Jewel Filters The Chief Engineer said that he was preparing estimates for this work This should be expedited

The existing water-supply scheme requires considerable improvement As against the open channel in which water is led now it is necessary to lay a pipe-line The Chie Engineer has prepared plans and estimates for sinking a well in the tank-bed and pumping water(b) The construction of the well laying of the pipe-line and the construction of an elevated tank are expected to cost about Rs 45 000/ Sowcar Mr Chikka Nanjappa Chett who is a Municipal Councillor very kindly promised to bear half the cost of the scheme on the understanding that the estimate would no exceed Rs 45 000/- This gift may be thankfully accepted It is necessary to name the new water works after Sowcar Mr Chikka Nanjappa Chetty both in recognition of his munificence and also as an incentive to other philanthropic people in the district The Chief Engineer said that the present Service Reservoir etc would all be useful in the new scheme Government would have to bear the balance of the cost of the new scheme The ways and means for this has to be considered in consultation with the Finance department (c) All the distribution main and branch pipes were stated to be choked up The Chief Engineer should kindly see to the cleaning of these pipes and rendering of the distribution of water-supply more e-

750B

cient

d Incidentally the attention of the Chief Engineer was drawn to the fact that i all cases of water-supply schemes which the Public Works Department have started com-plaints of inefficiency of the plant and defects in the distribution of water were being constantly received by the Government More efficient supervision on the part of the water Supply Division is called for

NOTE—Continued

Letter No 4672 dated the 29th November 1929 from the Chief Engineer of Mysore to the General Secretary to Government, Bangalore

---

Improvements to the Kolar Town Water Supply.

I have the honour to inform you that the present water supply arrangement at Kolar is unsatisfactory The con'our channel from Ammerhalli tank to the sand filters is open to contamination and the sand filters do not work satisfactorily in this case as the tank water is very heavily laden with silt The head available from the service reservoir is also not sufficient to reach the higher localities of the town The whole system requires remodelling

2 In order to improve the water supply, several proposals were considered and finally two schemes were worked up - one for sinking a curb well in the bed of Ammerhalli tank and pumping water therefrom to an elevated tank near the present servic reservoir at an estimated cost of Rs 52,550 and the other for replacing the earthen channel with Mune pipes and pumping water through pressure filters into an elevated tank at an estimated cost of Rs 67,960 The proposals are explained in the report accompanying the estimates. The smaller estimate was prepared in accordance with the wishes of Sir Chickchennaya Setty who ha promised to contribute liberally towards the improvement works The supply available in the well sunk in the tank bed will not be sufficient for the town water supply and the work of sinking a deep well is not only difficult but costly I therefore recommend the second estimate The source of supply is more certain than in the case of wells

3 At a conference held on the 31st March 1923 in the Devaraja Chamber with certain members of the Kolar Town Municipal Council, the members were also agreeable to have Jewell Filters

especially as electrical energy will became available Further, Sowcar Mr Chickachennappa Setty has come forward to bear a portion of the cost of the estimate - vide your letter No L 6714 dated the 26th April 1928 The cost of the improvements could not be reduced to less than the amount now estimated, viz , Rs 67,960

4 Since the Government is anxious that the work should be undertaken early, a provision of Rs 10,000 is also made for this work during the current year out of Rs 50,000 sanctioned for water supply to towns under "30 Grants for Public Improvements "

5 The favour of very early orders of Government is requested, so that arrangements may be made to take up the work during the current official year

27 Ye apparently the Municipal Council prefer the second scheme referred to by the Chief Engineer costing 67 ors, old perhaps it may suit somewhat more with the changes suggested. It is not clear to me how the scheme will be financed, except that the Municipality has promised a grant of 22500 rs. How is the rest of the cost proposed to be met? This should be made clear.

33) Returned, with compliments, to the Gener
Secretary to Government

2 The construction of a masonry duct is
not proposed, but the earthen channel now existing
was proposed to be replaced by Hume pipes (rein-
forced concrete) since the head was not much
it is stated that the Municipality prefer to use
C I pipes of the Bhadravati Iron Works, an estimat
for the same is prepared which amounts to Rs 52,0
as against Rs 25,028/- if Hume pipes are used In
the project already submitted, a provision of
Rs 22,500/- is made for laying Hume pipes I am
not in favour of the C I pipes at this additional
cost which if available could with advantage be ut
lised for an additional Service Reservoir as the
present proposal is to have one reservoir to hold
only 20,000 gallons

3 The Deputy Commissioner has stated vide
copy of D O enclosed that His Highness the Maharaj
has graciously consented to open the water works i
July 1929 Even if the work is started immediate
it will take not less than 6 months to complete th
works

4 With regards to the expenditure on the
works, it is stated that a sum of Rs 73,000/- has
been spent from 1897 to 1926-27, mainly for raisi
the waste weir of Haderhalli and Hirehalli tanks,
earthen channels and distribution, etc How much
of the cost was borne by the Municipality and the
Government is not exactly known

34) Improvement of Kollen Town water supply

The Chief Engineer has forwarded 2 estimates (1) for Rs 52550 for sinking a tank well in the bed of Amerkatte Tank & pumping water therefrom to an elevated tank near the present Service Reservoir & (2) for Rs 67560 for replacing the earthen channel leading to Sandfilters with Stone pipes & pumping water thro pressure filters into an elevated tank and recommends the larger estimate as the sinking of deep wells is not only difficult but also costly

35 The Govt accepts a pressure filter plant & substitution of the earthen channel by Bhadravathi Iron pipes The Member was of opinion that Iron pipes may be used & the estimate revised The Chief Engineer is not in favour of cast Iron pipes and wants Stone pipes also For the latter he estimates Rs 27500 formerly & now estimates it at Rs 25028 So a sum of Rs 2572 has to be added to the original estimate of Rs 67560 accepted to bring estimate amounted Rs 70432 in all

25028 - 2572 = 2572

52050 - 25078 = 26972 + 67560 = 94532

36 Cast Iron pipes are to be used for the Channel, the work would cost Rs 52000 So the estimate would amount to Rs 94532

Govt Pvt] Which has to be adopted as per G.O.

Pencil Note IV

Pencil Note V

HD for information as to the respective amount spent by the Govt & Municipality is required, Mr Nundel or the Supt will have to be addressed

HD The loan referred to by us is half the estimate of Rs 30,530 for water supply pipes which Mr Nundel have been asked to pay & for which provision has been made in the Budget for 1929-30. The Municipality will thus have to pay Rs 15,265 only. The estimate for Rs 30000 odd may perhaps be adopted with Hume pipes & the loan of Rs 15000 wanted & Mr Nundel may be asked to contribute Rs 15000 out of which Rs 5000 may be paid by Chittaranjan & the balance only next year. Rs 10000 has been already allotted this year. If the larger one is to be adopted Nundel will have to pay more. Mr Ray favours the policy of first contributing ½ the cost in each case.

Asst Secy for very early attention
16/7

57) The chief Engr has estimated the cost of improving the Kolar Town water supply at Rs 45000, but now he has sent a fresh estimate amounting to Rs 69000

A note is submitted
17/7

Extract from the Town Municipal Address Kolar

---

(1) The source of our water supply is the Ammerahally Tank which is at a distance of about 2 miles from here The water runs through an open earthen channel to the settling tanks A large quantity of water goes to waste thereby while there is the risk of contamination The following arrangements are essential if the people of the town is to be supplied with pure, filtered water

(1) The water from the tank to be led through iron pipes to the settling tanks,

(2) The water to be purified through "filters"

(3) A storage tank to be built on an elevated place and the water passing through the filters to be pumped into it and from there distributed through pipes to the different parts of the city

A scheme on these lines may be kindly worked out and the people helped to get pure drinking water Sahuk Mr V R Chiknanjappa Setty has very kindly offered to meet a sum of Rs 22,500/- out of the outlay which the scheme will entail In view of the low condition of the finances of the Municipality, the balance of cost required may be kindly met from State funds

x x x

(2) The sand filters which have now been built to purify the water in the Ammerahalli tank have failed of their purpose but the Municipality is required to meet one half of the cost of constructing them The Municipal Council may be kindly excused from this payment as no use has accrued from these filters

NOTE OI NO (1)

IMPROVEMENT OF WATER SUPPLY, KOLAR TC

The Chief Engineer forwarded 2 estimates (1) for Rs 52 550/- for sinking a - - - curb well in the bed of Amirthalli Tank and pumping water therefrom to an elevated tank near the present service Reservoir and (2) for Rs 67 960/- for replacing the earthen channel leading to the sand filters with Hume pipes and pumping water through Pressure Jewel Filters into an elevated Tank and recommended scheme No (2) costing Rs 67 960 as the first estimate was found to be difficult and costly

The Municipality wanted Jewel Filter Plant and substitution of the earthen - - channel by Bhadravati Iron Pipes The Chief Engineer preferred Hume pipes as the cost of working with Iron Pipes for the channel - - would increase the estimate to Rs 94 932/-

The Municipality wanted that the whole cost should be met by Government excluding the amount of Rs 22 500/- donated by - - - Mr Chickchinnanjappa Chetty

The Chief Engineer was ordered to take up the work of replacing the earthen channels by Hume pipes as early as possible

As regards further works it was ordered that a copy of the Chief Engineer's note -- might be sent to Deputy Commissioner Kolar and he may be asked to send up a memo as to

Ky J & S

(27)

to how the water works of the Town were -- financed in the past and how the Municipality would finance the future works

The Chief Engineer has now sent up an estimate for Rs 69 000/- for the whole work - and states that the cost of the first part of the scheme would amount to Rs 21 210/- and has sought sanction for the estimate for Rs 21 210/- and the cost thereof being met from the contribution promised by Mr Chickchinnanjappa Chetty, the other items being taken up in due -- course as funds become available

The Deputy Commissioner's reply in regard to future financing has not yet -- been received

In the address it is prayed that the balance of cost may be met from State - - Funds

In the State Budget for 1929-30 only a sum of Rs 50 000/- is provided for water supply in Towns under 30 Public Improvements grant A major portion of this will be required to meet existing commitments It may not be possible to give the whole of the balance required for the work from the above source The Deputy Commissioner's porposals called for in the matter have therefore to be awaited before final - - - orders can be passed on this

The

The finances of the Municipal Council are not very satisfactory They want exemption even for payment of the loan advanced to them for sand filters which had to be -- refused about which a note is separately given.

9) Sand Filters

A loan of Rs 15 000/- was sanc ioned for the Sand Filters connected with the water supply of the Town in Government Order No L 425-20/A1 15-22-29 dated the 17th July 1923 at 7% interest the interest being paid annually by the Municipality along with Rs 1 000/- per annum towards Principal They had to set apart the income from the Toll for repayment as above the balance being met from their ordinary resources -- partly on account of slender finances and partly on account of the fact that sand -- filters were not satisfactory the Kolar -- Town Mun cipal Council wanted the loan to be waived. Government declined to waive the same in their letter No L 251/M1 109-26-13 dated the 16th July 1929 The request for waiving was repeatedly pressed by the Municipality again and this was not granted but the municipal Council was permitted to pay the loan from 1927-28 in instalments with 7% per cent interest

A provision was made for this in the Budget for 1928-29 and the Municipal Council not having paid this the Comptroller seems to have issued instructions to the District Treasury Officer Kolar to adjust Rs 1 900/- towards the loan in May 1929

The municipal Council again pressed their request for waiving of the loan and they stated that if this could not be granted they may be allowed to postpone the payment

They were told in June 1929 that as provision for repayment in instalments had already been made in the budget their --- re ues c nnot be c lled with

Final Note by the Second Member of Council

Subject —

IMPROVING THE WATER SUPPLY TO KOLAR TOWN

The present water supply arrangement having been found to be unsatisfactory, several proposals to bring the system to a satisfactory condition were worked up and they were considered by the Municipal Council at their meeting held on 14th March 1929, when it was decided to have a Jewel Filter Plant and to instal a pump and filter near the present filter bed and reservoir utilising the present cistern as settling tanks and to substitute the present earthen channel from the water supply tank to the filter bed by Iron Pipes Mr Chickchennanjappa Chetty, Municipal Councillor promised to pay R. 22,500/- towards the improvements

The Secretary to Government, Public Works Department who was consulted in the matter submitted for sanction an estimate for R. 69,000/ as noted in the margin for bringing the Water Supply system to a satisfactory condition and recommended that the work of replacing the earthen channel from Ammerhalli Tank to the Filter bed by 9" Hume pipes costing R. 21,210/ may be immediately taken on hand, the cost being met out of the contribution promised by Mr Chickchennananjappa Chetty

Replacing the earthen channel from the Ammerhalli Tank to the Filters by laying 9" Hume pipes	R.	21,210/
Construction of Filter House	"	7 495/
Installation of three Jewel-Filters with pumps	"	24,990/
Erection of an elevated steel tank to hold 20,000 gallons	"	12,400/
Converting the existing filter beds into settling tanks	"	575/
Contingencies @ 5%		2,273/
Total	Rs	68,943/
or in round figures		69 000/-

The question was considered in Council when it was decided that instead of Hume pipes Bhadravati Cast Iron Pipes may be used at current market rates the excess cost of the estimate on this account being borne by Government and the balance of the estimate be met equally both by Government and the Municipality

The cost of Cast Iron Pipes calculated as above was found to amount to R. 33,000/- as against R. 21,210/- for Hume pipes and the estimate as finally revised has been sanctioned for P 81,000/- The Municipal Council have since resolved to meet the balance of their share also

The estimate as thus finally revised has been sanctioned and the Deputy Commissioner has been requested to convey to Mr Chickchernanjappa Chetty the thanks of Government for his generous gift for the Kolar Water Supply improvement The entire works will when com leted be named after Mr Chickchennanjappa Chetty as desired by the Municipal Council

The papers are submitted for His Highness' gracious perusal

The Chief Engineer of Mysore

Sir,

I am directed to forward herewith extracts from the proceedings of the Conference with certain members of the Kolar Town Municipal Council held in the Dewan's Chambers on 31st March 1928 and to request you to be so good as to submit proposals very early for installing Jewel Filters for the local water supply

Sinking a well in the lank bed & pumping water-
Laying of the pipe line &
Construction of an elevated tank

Plans and estimates in regard to the marginally noted schemes at a cost not exceeding Rs 45,000/- should be sent up for the orders of Government as early as practicable

The complaint that the distribution main and branch pipes are ~~chocked~~ ~~clotted~~ up ~~is not satisfactory~~ may be worked up ~~This should be~~ & remedied at once and arrargements also made for avoiding complaints of inefficiency of plant and defects in the water supply which are usual in ~~the~~ Such schemes, ~~started by the P~~

I have etc

SIR

Subject - Improvements to the Kolar Town Water Supply

I have the honour to inform you that the present water supp arrangement at Kolar is unsatisfactory The contour channel from - Ammerhalli tank to the sand filters is open to contamination, and the - sand filters do not work satisfactorily in this case as the tank water is very heavily laden with silt The head available from the service reservoir is also not sufficient to reach the higher localities of the town The whole system requires remodelling

2 In order to improve the water supply, several proposals were considered and finally two schemes were worked up - one for sinking a curb well in the bed of Ammerhalli tank and pumping water therefrom to an elevated tank near the present service reservoir, at an estimated cost of Rs 52,550; and the other for replacing the earthen channel with Hume pipes ard pumping water through pressure filters into an elevated tank at an estimated cost of Rs 67,960/- The proposals are explained in the report accompanying the estimates The smaller estimate was - - - prepared in accordance with the wishes of Mr Chicknanjeppa Setty who ha

promised to contribute liberally towards the improvement works The supply available in the well sunk in the tank bed will not be sufficient for the town water supply and the work of sinking a -- deep wells is not only difficult but costly I therefore - - - - recommend the second estimate The source of supply is more --- certain than in the case of wells

3 At a conference held on the 31st March 1923 in the Dewan's chamber with certain members of the Kolar Town Municipal Council, the members were also agreeable to have Jewell Filters especially as electrical energy will become available Further, Sowcar --- ar Chick[illegible] Setty has come forward to bear a portion of the cost of the estimate - viz your letter No L 6714 dated the 26th April 1923 The cost of the improvements could not be reduced - to less than the amount now estimated, viz , Rs 67,960/-

4 Since the Government is anxious that the work should be -- undertaken early, a provision of Rs 10,000/- is also made for this work during the current year out of Rs 50,000/- sanctioned for -- water supply to towns under "30 Crore for Public Improvement"

5 The favour of very early orders of Government is requested, so that arrangements may be made to take up the work during the - current official year

I have the honour to be,

Sir,

Your most obedient servant,

[illegible] 23.

SIR

Subject - Kolar Town - Water Supply

L 2444

Adverting to your letter No L 4306/M1 177-28-2 dated the 17th December 1928 and L 5925/M1 177-28-4 dated the 6th March 1929 in the matter of the improvement of water supply to Kolar Town, I have the honour to return herewith the notes of inspection of the Kolar Water Works by the Superintending - Engineer, ~~in~~ Mysore Circle and the letter No 4672 dated the 29th November 1928 from the Chief Engineer in Mysore to your address and its enclosures in original, and to state as follows -

1 I convened a special Meeting of the Kolar Town Municipal Council on the 14th March 1929 with a view to discuss all the various points and arrive at a definite conclusion in regard to the improvement of water supply having in view the funds available After considerable discussion in which Mr V R Chikkachennanjappa Setty took a leading part, It was decided that it is not practicable to have any scheme for - providing infilteration wells in Ammerahalli tank and pumping water therefrom so as to avoid filteration at Kolar It was considered that any such scheme contained in it the danger of contamination of the well water and do not offer absolute - security It was therefore decided to have a Jewel Filter Plant near Kolar and to instal the pump and filter near the prese

P T O

present filter bed and reservoir utilising the present cisterns as settling tanks

2 In order to keep down the cost as much as possible it was decided to construct the pump house, filter and service reservoir in a single three storied building by the side of the exist filter beds It was also decided to substitute the prese arthen channel by a Bhadravathi Iron pipe conduit from the Ammerahalli Tank to the present filter beds, the pipe being of such dimensions as can reasonably deliver 150,000 gallons a day at the present filter bed and reservoir by gravity flow

3 To keeping down the cost it was considered sufficient if the new service reservoirs of filtered water be built only of the capacity of 50,000/- gallons in two portions, in the second floor of the new building

4 As the Government have provided Rs 10,000/- for the improvement of Kolar Water Supply during the current year, Mr V. R Chikkachennanjappa Setty has agreed to pay immediately a similar sum of Rs 10,000/- so that the entire sum of Rs 20,000 may be spent before the end of June 1929 on the purchase of - laying of Bhadravathi Iron pipes for the main conduit, as - prevention of contamination is the most urgent problem of the Kolar Water Supply Mr Chikkachennanjappa Setty will pay the - balance of Rs 12,500/- next year as soon as the filter bed and pump house construction is taken up

5 The Kolar Town has been suffering from defective water supply for several years past and has spent considerable amounts of money in the past for such supply as it now is In view of the importance of the Town, as the Headquarters of the District and to ensure its further development, I strongly - recommend that the entire portion of the balance of cost in excess to Rs 22,500/- which would be paid by Mr Chikkachennanjappa Setty may kindly be borne by the Government and the work proceeded with expeditiously

6 On completion, the entire water supply system may kindly be allowed to be named after Mr V R Chikkachennanjappa Setty in recognition of his generous donation

7 In the interests of expeditious work, I beg that

that the Public Works Department may kindly be instructed to revise the estimates promptly, dividing it into two parts - viz , (1) laying the pipe main and (2) installing electric pump and Jewel Filters ~~beds~~ and to put in hand the laying of the main without delay

I have the honour to be

Subject - Improvement of water Supply to Kolar Town

Resolutions -

1 Main from tank to present reservoir - Bhadravathi pipe which can deliver 1,50,000/- gallons per day at the reservoir

2 For alumination and settling tanks - The present filt beds and service reservoirs should be used

3 A combined motor and pump house, filter chamber and service reservoir overhead in three floors to be constru close to the present service reservoir

4 The new service reservoir may be in two portions of 25,000 gallons each

5 The distribution system will be overhauled and re-aligned so as to provide for house-connections- A scheme for this last item may be got prepared and the Municipal Council will consider it and also the water rate and charges for house-connections will be settled

6 The Municipal Council pray that the Government may get the estimate revised as stated in 1 to 4 above and sanction its construction without delay the cost in excess of the generous donation of Rs 22,500/- of Mr V R Chikkachennanjappa Setty being graciously borne by the Government in view of the straitened finances of the Municipality and the heavy cost it has incurred in the past for the Water Supply

7 The entire system will be named after the donor Mr V R Chikkachennanjappa Setty

8 The Government may graciously direct the laying of the Main from the Ammerahalli Tank to the present filter-beds this year from the Government grant of Rs 10 000/- and the first instalment of Rs 10 000/- out of Mr Chikkachennanjappa Setty's donation which will be paid by him immediately

President, 14 3 29
Town Municipal Council, Kolar

raise Maderhalli tank by 6 feet and raise Ammerahalli also by 6' and conserve both tanks for water supply to Kolar Towm It was also ordered that the channel from - Ammerahalli to town outskirts may be open channel for the time being An estimate - amounting to Rs 45,214/- was sanctioned - for these works in 1897 and another estimate for Rs 24,896/- was sanctioned for - the channel and distributory works The estimate was subsequently revised and the total outlay on these works was Rs 73,492/ Subsequently a scheme was got up for improving the water works by (1) the construction of a covered masonry duct at a cost of Rs 15,000/- (2) replacement of cement pipes by iron pipes and (3) construction of three slow sand filter beds at a cost of Rs 8000/- Government sanctioned the last two works only in May 1914 and thus the channel from Ammerahalli to Filter beds remains open and subject to contamination etc , These two works referred to above were completed at a total cost o- Rs 16,358/- Thus the capital outlay on - the Kolar Town water works is roughly - Rs 90,000/-

CONDITION OF WORKS

Maderahalli Tank - The original capacity of this tank was 22 units By raising the

weir by

raise the storage higher The constructive details of the tank are -

R L of weir	156 00
" of revetment	160 00
" of top of bund	163 00
Length of weir	200'(right)
R L of sluice	145 20
Length of bund	34 grades

The revetment in several grades has been disturbed The wate weir which is of Ogee type with a drop of 12' and a flat apron of 9' width and a sloping apron of 1 in 8 48 feet long is,in sound condition but requires patch repairs here and there There is a hollow formed behind the right wing of the weir which requires packing There is percolation below the bund in several grades The Executive Engineer stated that an estimate for repairs of - masonry works has been sent to the President,Municipality The repairs should be put on hand this summer to prevent serious damages

OPEN CHANNEL

The open channel from Ammerahalli was inspected in detail It is 1¾ mile long has a fall of 2 feet per mile The channel has breached inseveral furlongs There are obstructions to smooth flow of water Water was found to stagnate at the 1st Aqueduct Again at 6/1 the velocity of flow was almost zero The whole place stagnated with

water The channel should be taken in - double embankment at this place At 7/1, there is an aqueduct which has leaky sides and almost half the quantity of water is going to waste In 8/1 & 1/2, there is no flow - water stagnates sides of the channel have fallen It was observed that the channel was in a very neglected state The channel is not cleared of weeds No silt has been removed It has narrowed down in places Masonry works are neglected Embankments of the channel have completely disappeared with the rsult that the water - stagnates any where and every where There is great wastage and it must also be said that water is contaminated in this channel to a considerable extent It is high time that the Municipality employs a watchman to take care of this channel and patrol it daily

FILTER BEDS & SERVICE RESERVOIR - The filter beds are not acting Sand has not been replaced The Mechanic and other employees of Municipality do not know how to look after the filters The sand in the - lower layer of the Filter bed is of excellent quality but the top 3", is mud Instructions were given to remove this layer completely and not to use it again From the ~~sluice~~ reservoir a 7" main supplies water to

Town There are 115 public fountains and no house connections except for a few - Government Quarters The supply in the taps is not satisfactory, due to the - scanty head, insufficient storage in the reservoir and incrustation in the small distributory pipes

G E N E R A L

Population of Kolar in 1891 was - 12,148 and as per Census of 1921 it is 13,239 The population is increasing The Town is growing in importance slowly but steadily With the advent of electric - power supply, the growth may be expected to be faster A well-thoughtout water - supply scheme is necessary The storage in the 2 lakes is adequate as Nederahalli can supply for 7 months and Ammerahalli for 1 year and 7 months continuously with out any replenishment by rain The open channel from Ammerahalli to service Reservoir must be converted into a masonry duct soon The filter plant must be put in order The distribution pipes must be removed and thoroughly hauled up and relaid with a definite programme The number of fountains must be increased and - house cornections must be introduced

S Srinivasaiya
Superintending Engineer,
Mysore Circle

Bangalore,
January 1929

IC 27/1

Letter No 4672 dated 9th November 1928, from the Chief Engineer of Mysore Bangalore to the General Secretary to the Government of Mysore

Subject - Improvements to the Kolar Town Water Supply

I have the honour to inform you that the present water supply arrangement at Kolar is unsatisfactory The contour channel from Ammerhalli tank to the sand filters is open to contamination and the sand filters do not work satisfactorily in this case as the tank water is very heavily laden with silt The head available from the service reservoir is also not sufficient to reach the higher localities of the town The whole system requires remodelling

2 In order to improve the water supply several proposals were considered and finally two schemes were worked up - one for sinking a curb well in the bed of Ammerhalli tank and pumping water therefrom to an elevated tank near the present service reservoir at an estimate cost of Rs 52 550/- and the other for replacing the earthen channel with Hume pipes and pumping water through pressure filters into an elevated tank at an estimated cost of Rs 67,960/- The proposals are explained in the report accompanying the estimates The smaller estimate was prepared in accordance with the wishes of Mr Chickchennappa Setty who has promised to contribute liberally towards the improvement works The supply available in the well sunk in the tank bed will not be sufficient for the town water supply and the work of sinking deep wells is not only difficult but costly I therefore recommend the second estimate The source of supply is more certain than in the case of wells

3 At a conference held on the 31st March 1928 in the Dewan Chamber with certain members of the Kolar Town Municipal Council, the members were also agreeable to have Jewell Filters especially as electrical energy will became available Further Sowcar - - Mr Chickchennappa Setty has come forward to bear a portion of the cost of the estimate - vide your letter No L 6714 dated the 26th April 1928 The cost of the improvements could not be reduced to less than the amount now estimated viz Rs 67 960/-

4 Since the Government is anxious that the work should undertaken early a provision of Rs 10 000/- is also made for this work during the current year out of Rs 50 000/- sanctioned for water supply to towns under "30 Grants for Public Improvements"

5 The favour of very early orders of Government is requested, so that arrangements may be made to take up the work during the current official year

__/ 6__ 192

Dear Sir,

I showed by the vice President of the Kolar town capability and sowcar Mumtaz Saheb a municipal Councillor and leading citizen of the place, I sought an interview with the Dewan saheb, without giving him previous intimation on wednesday last I sought him my business and did not want to trouble him - I was informed that he would be going to Mysore that very night and was expected back at Bangalore on Sunday last I was a General Holiday and so I avoid them to give us an interview on Monday

The object of our visit and for seeking the interview was his self one wanted to him removed hanging over Our Head. We wanted I represent that the hanging if it had been ordered, might be kept in abeyance for about three months and if he had heard the reasons thereof, we would have tried to satisfy him that public interest and public interest was in no manner bound for our prayer and that we should the very least were to attempt to fal-

the Government view of any, and I am in any other subjects are only interested objects or aims

The scheme on set way in early remarks The water supply scheme to Kolar is in the advanced was about the same time. on certain charitable hammam, expenses per mensem be on will be Rs 10000 this year as in case next year of the Government grant, Rs 10000 is placed at the disposal of the municipalities, it is our desire that the case should be taken up until Rs 20000 work when thousand before the end of this official year is over to award a purse of the grant the treasurer of the grant municipalities have been intimated next year

You may inform the Commissioner of this terms

Sir

In reply to your letter No L 8348/Ml 177-28-7 dated 22nd June 1929, requesting a memo as to how the Kolar Water Supply works were financed in the past and how the Municipality propose to --- finance the future works, I have the honor to submit herewith a note proposed by the President of the Kolar Town Municipality showing the previous history of Kolar Town ater Supply

As regards the future the Municipal Council's prayer as reported in my letter No A 5 C C 8/28-29 dated 19th March 1929 is that the Goverrment may be pleased to bear the entire portion of the cost of the new scheme in excess of the contribution of Rs 22,500/- which will be paid by Mr Chik Channanjappa Setti

The exact cost of the entire scheme is not yet known If the final estimates for the Filters and Pump House are sent I shall place the matter again before the Municipal Council for their further resolution if the Government do not see their way to generously sanction the prayer of the Municipal Council

I request that the work of laying Hume pipes ordered in your letter No L 8349/ dated 22nd June 1929 to the Chief Engineer may kindly be ordered to be executed expeditiously

I have the honor to be,
Sir,
Your most obedient servant,

Deputy Commissioner,
Kolar District

Note on Water Supply Scheme of Kolar Town

Considering the water scarcity in the Kolar Town the Government sanctioned a project at a cost of Rs 45 215 in their order No 1514-15/L & 420-92 dated 28th July 1898 directing the Municipality to bear the moiety of the cost But the finances of the Municipality was slender at the time and the Government were therefore pleased to grant the amount equal to the moiety of cost as a loan with interest at 4% per annum repayable in 11 instalments This project consisted of acquisition and improvement of Ammerahalli and Maderahalli tanks This was completed in the year 1909 In the meantime a reference was made to Government to extend the period of repayment ofthe above loan to 20 annual instalment and further to grant an additional loan to meet the cost of an open channel for the flow of water from the tank to the Reservoir An estimate for Rs 13 674/- for the deliver and distribution scheme was sanctioned by Government and the - moiety of the cost of the project was again treated as a loan and the aggregate loan of Rs 29 444/- was ordered to be repaid in 20 instalments A revised agreement was accordingly executed and submitted to Government

The Council promised to meet the maintenance charges of the Water supply works from the increase of revenue anticipated by the revision of house tax

45215
13674
58889

(Vide orders No 6992-94/L 104-9-6 dated 19-11-00 (2) 1047-51/6042-46 dated 12-12-900 and(3) 9046-46/I F 16-1-01)

The water works of the Town were handed over to the Municipality in 1902 and in 1903 the Ammerahalli tank was breached due to heavy rains and Government sanctioned a grant-in-aid of Rs 11 241/- for effecting repairs to the tank in their Order No 451-4/ I F 420-92 dated 21-5-1904

The Council could not repay even one instalment of the loan owing to its poor resources till 1906 When the Government pressed for the repayment of the loan the Council represented of their hard financial position and requested the Government to waive the loan and the interest accrued thereon The Government have accordingly waived the loan of -- Rs 29 444/- and interest due by the Municipality in their Order No F1 8065-77/M1 24-6-05 (246-05) 18) dated 23-5-1906

During the year 1914-15 another estimate was sanctioned to improve the quality of water and was revised to Rs 16 657-3-11 The revised estimate was also sanctioned by Government in their order No 768-69/P W 4088-91 dated 30-3-18 on the terms that the cost thereof should be met in equal proportions by the Government and the Municipality Accordingly the Council paid their moiety

A further project for the construction of filter beds and a service reservoir at a cost Rs 29 000 was sanctioned by Government in their Order No I 2692-70/M1 15-22-54 dated 13th October 1923 and the cost had to be met in equal proportions by Government and the Municipality

As the financial position of the Municipality was not encouraging the Government sanctioned a loan of Rs 15,000 to meet the moiet

The project was completed and handed over to the Municipality during 24-25 The loan has not been repaid as yet

These Sand filters too did not improve the quality of the water to the expected limit and the water continues to be as turbid as before The Council have repeatedly represented to waive this loan also as the above project was not useful Besides the finances continued to be poor

On a repre entation of Mr V R Chikkachannanjappa Setti Sowcar and ~~Kxxx~~ chant Municipal Councillor before the Dewan Saheb that he would contribute a sum of Rs 20 500 for further improvement of water supply to Kolar Town a fresh project was prepared and sent for the opinion of the Municipal Council, who at their special general meeting held on 14-3-29 resolved that theGovernment should be approached to bear the cost in excess of the generous donation of Rs 22 500 of Mr Channanaiappa Setti in view of the straightened finances of the Municipality and the whole project to be named after him

SIR

In continuation of my letter No:A 5 C 2063/28-29 dated 21st August 1929, in the matter of the improvement of the Kolar Town Water Supply, I have the honor to state that a Special -- meeting of the Council was convened to-day on receipt of the telegram from the Private Secretary to the Dewan enquiring whether the Kolar Town Municipal Council were willing to contribute their quota for the Water Supply Scheme and stating that if they are willing, sanction will be accorded to the project The Municipal Council at a meeting have resolved that they are agreeable to pay sum of Rs 13,000/- in addition to the donation of Rs 22,500/- promised by Mr V R Chikkachanranjappa Setti to make up half the cost of the Scheme, i e , Rs 71,000/- and requesting that the project may be kindly sanctioned I request that sanction of -- Government may kindly be accorded for the project providing for:

(i) Substituting the earthern channel by a pipe line from Ammerahalli tank to the Water Supply Reservoir, Vide Your letter No:L 8349/M1 177-28-8 dated 22nd June 1929, to the Chief Engineer,

(ii) Providing Electric Pump and Pressure Filters including Alum plant and

(iii) Constructing a High Level Reservoir

2 On completion, the entire Water Supply System may kindly be allowed to be named after Mr V R Chikkacharnanjappa Setti in recognition of his generous donation as resolved by the Municipal Council at its special meeting on the 14th March 1929 Vide Paragraph 6 of my letter No A 5-T C 8/28-29 dated 19th March 1929

3. The resolution of the Municipal Council and copy of letter No:218/28-29 dated 20th October 1929 from the President, Municipal Council are also sent enclosed for reference

I have the honor to be,

K Letter No A5 T C 8 dated the 19th March 1929 from the Deputy Commissioner Kolar District, forwarding for consideration of Government a resolution of the Kolar Town Municipal Council in regard to the question of improving the water supply to the town

I 2 U O Note No D 79 dated 13th July 192 from the Secretary to Government, Public Wor Department submitting for sanction an estimate for Rs 69 000/- for bringing the Kolar Town Water Supply system to a satisfactory condition and recommending that the work of replacing the earthen channel from Ammerahalli Tank to the Filter bed by 9" Hum pipes costing Rs 21 210/- included in the estimate may be immediately taken on hand t cost being met out of the contribution promi -ed by Mr Chickchennananjappa Chetty

P W D 3 Correspondence ending with letter No A5 C 2063/28-29 dated the 20th October 1929 from the Deputy Commissioner Kolar District forwarding the resolution of the Kolar Municipal Council agreeing to pay Rs 13,000/- in addition to the donation of Rs 22 500/- promised by Mr Chickchennananjap Chetty to make up half the cost of the schem estimated to amount to about Rs 71 000/- and recommending that the entire water supply system may be allowed to be named after Mr V R Chikkachennanjappa Chetty in recognition of his generous donation

4 U O Note No 75 dated 23rd October 1929 from the Chief Engineer in Mysore stating that the estima e for the Bhadravati cast iron pipes according to the current market rates viz @ Rs 4-6-0 F O R Kolar amounts to Rs 34 800/- as against Rs 33 430/- @ Rs 3-8-0 per Cwt and the total cost of the estimate for the entire water supply scheme now amounts to Rs 82 600/- as against Rs 69 000/- originally estimated

---

O r d e r -- No L3038-40 unnecessary etc
Xue 177-28-14

Dated Bangalore the 25-10-29

The estimate as now revised by the Chief Engineer amounting to Rs 82 600/- providing for all the works required to be executed is sanctioned The cost of the work on account of Hume pipes is estimated at Rs 21 210/- and the revised cost at the current market rate on account of Bhadravati cast iron pipes which alone should be used is Rs 34 800/- The excess cost amounting to Rs 13 590/- on this account will be met by Government and the balance of the revised estimate will be met by the Government and the Municipal Council in equal shares Under this, the Municipal Council will have to pay Rs 34 500/- Towards this there is already a donation of Rs 22 500/- of Mr Chickchennananjappa Chetty and the Municipal Council have now resolved to meet the balance of their share also

2 A State grant of Rs 9 250/- has been provided for the works out of the grant for water supply in Towns during the current year The Chief Engineer is therefore requested to proceed at once with the work of replacement of the earthen channel by Cast iron pipes with the funds now available and to provide for the balance of Government share in the next year's budget

3 The Deputy Commissioner is requested to convey to Mr Chikkachennananjappa Chetty the thanks of Government for his generous gift for the Kolar Town Water supply Improvement The entire work will ~~after~~ When completed be named after Mr V R Chikkachannanjappa Chetty as proposed by the Municipal Council
